

Backup Services... FTP, Self-Managed and Managed

Storing data on a remote backup server is an extra measure of security for your business-critical files. Online server backup solutions protect against disk crashes, viruses, theft and natural disasters which could cause data loss. Codero offers dedicated server customers three backup plans that support all operating systems: Windows®, Linux and Unix®.

File Transfer Protocol (FTP) Backup:

- Access and restore files manually via FTP to a trusted server
- Secure FTP protocol uses SSL encryption to protect username, password and file contents over network
- Backup server not available externally but access is allowed from within your dedicated server
- Choose files to back up to server at the time most convenient for you
- Initial plan starts with 10GB of FTP space which can be increased up to 100GB in 10GB increments

Self-Managed EVault Backup:

- Fully automated data protection
- EVault end-to-end encryption protects sensitive data
- EVault software backs up data blocks in new or altered files
- EVault offers support for multiple platforms and applications
- 20 GB of storage and fast restores, can be increased up to 100GB in 10GB increments

Standard with Backup Services:

- 100% uptime guarantee
- 24/7/365 live U.S.-based support
- Customized configurations
- 100% powered green hosting
- Rewards Points program
- SAS 70 Type II certified
- Knowledge Base detailed answers
- Live chat real-time support
- Customer portal for troubleshooting

Managed EVault Backup:

- High-end data integrity ensured through multiple layers of security
- Rely on best practices in automatic backups, online access and point-in-time recovery
- Data monitoring and recovery can be customized to your environment
- Backup is scalable to grow with your data management needs
- Initial plan starts with 20GB of storage which can be increased up to 100GB in 10GB increments
